

Carbo-MAX

Liquid from nature for resilient growth

NANO - FERTILIZER

PRODUCT SPECIFICATIONS

Global Green Pact has developed Carbo-MAX to a unique recipe that can provide more vital-healthy growing conditions through improved soil resistance. Tests show that Carbo-MAX can provide better absorption of trace elements than with fulvic or humic acids. The "CEC" (cation-exchange capacity) is incredibly important for correct absorption of useful elements. These elements provide for a much healthier and more resilient plants. Tougher cells may be less affected by, and fungal spores. The nutrients in Carbo-MAX are extremely complex and focused on the building of beneficial microorganisms and the control elements for growth and defense processes in your crop. Carbo-MAX has a stimulating and supporting role for CFUs (colony forming units). Useful microorganisms may generate additional oxygen in the soil which provides a suppression of mostly pathogenic (anaerobic) micro-organisms. In short, a product which contributes to a more natural resilience cultivation. For specific questions and advice, please contact us.

HIGHLIGHTS

- Improves the absorption of:
 - Ca, Fe, Mg, Cu, Zn, Mn (+)
- Unique on the market
- No fulvic or humic acid.
- Can increase resistance
- Complex carbon source
- No MRLs
- Highly concentrated

Carbo-MAX

plant strengthener
Increases CEC / CFU

APPLICATION
Substrate
Soil

DOSAGE
2 LTR / HA
4 LTR / HA

REMARK
EVERY 1-2 WEEKS
EVERY 1-2 WEEKS

Carbo-MAX contains high concentrated liquid carbon the most essential element of all life.

Complex features: Improves the CEC value Cation Exchange Capacity and CFU Colony Forming Units

NO MRL'S
Natural Product

**ESSENTIAL FOR A
RESILIENT GROWTH**

GlobalGreenPact

Is certified according to the CUC
Is registered producer and trader of fertilizers in
accordance with the RVO (Holland)

Carbo-MAX meets the requirements for an EC fertilizer.

**Control Union
Certification**

GRAM / LITER
± 1260

DS% w/v
± 70%
